News Release for Immediate Release

5/13/08

Elite Finishing LLC is excited to announce two new finishing options, Electroless Nickel on Aluminum and Copper on Steel.

Elite Finishing LLC (EF) has added two very special services to their line of finishes which include Chrome, Bright, Satin, Duplex, Woods and now Electroless Nickel, and Copper Plating. All of these finishes can be put onto Aluminum, Brass, Pewter and Steel.

Electroless Nickel is used for corrosion resistance on very tight tolerance parts or parts that cannot normally be plated with conventional nickel plating. These would include parts with sharp edges, deep recesses or right angles. It is a very durable finish that also gives a very consistent matte finish.

Copper plating on steel is used for highly cosmetic parts. The copper layer creates a surface on the part that can be buffed smooth and plated over with nickel and chrome to give a high luster, very deep looking chrome finish. Many motorcycle parts use this finish to give the parts a show quality finish.

If you have any questions concerning this news release or any other questions about **Elite's** capabilities, please contact Jaime Maliszewski at 414-489-9710 or email jaimem@elitefinishing.net. **Elite Finishing LLC** is a subsidiary of **Reliable Plating Works, Inc.**

Yours truly,

Jaime J. Maliszewski
